swisstopo's Vision

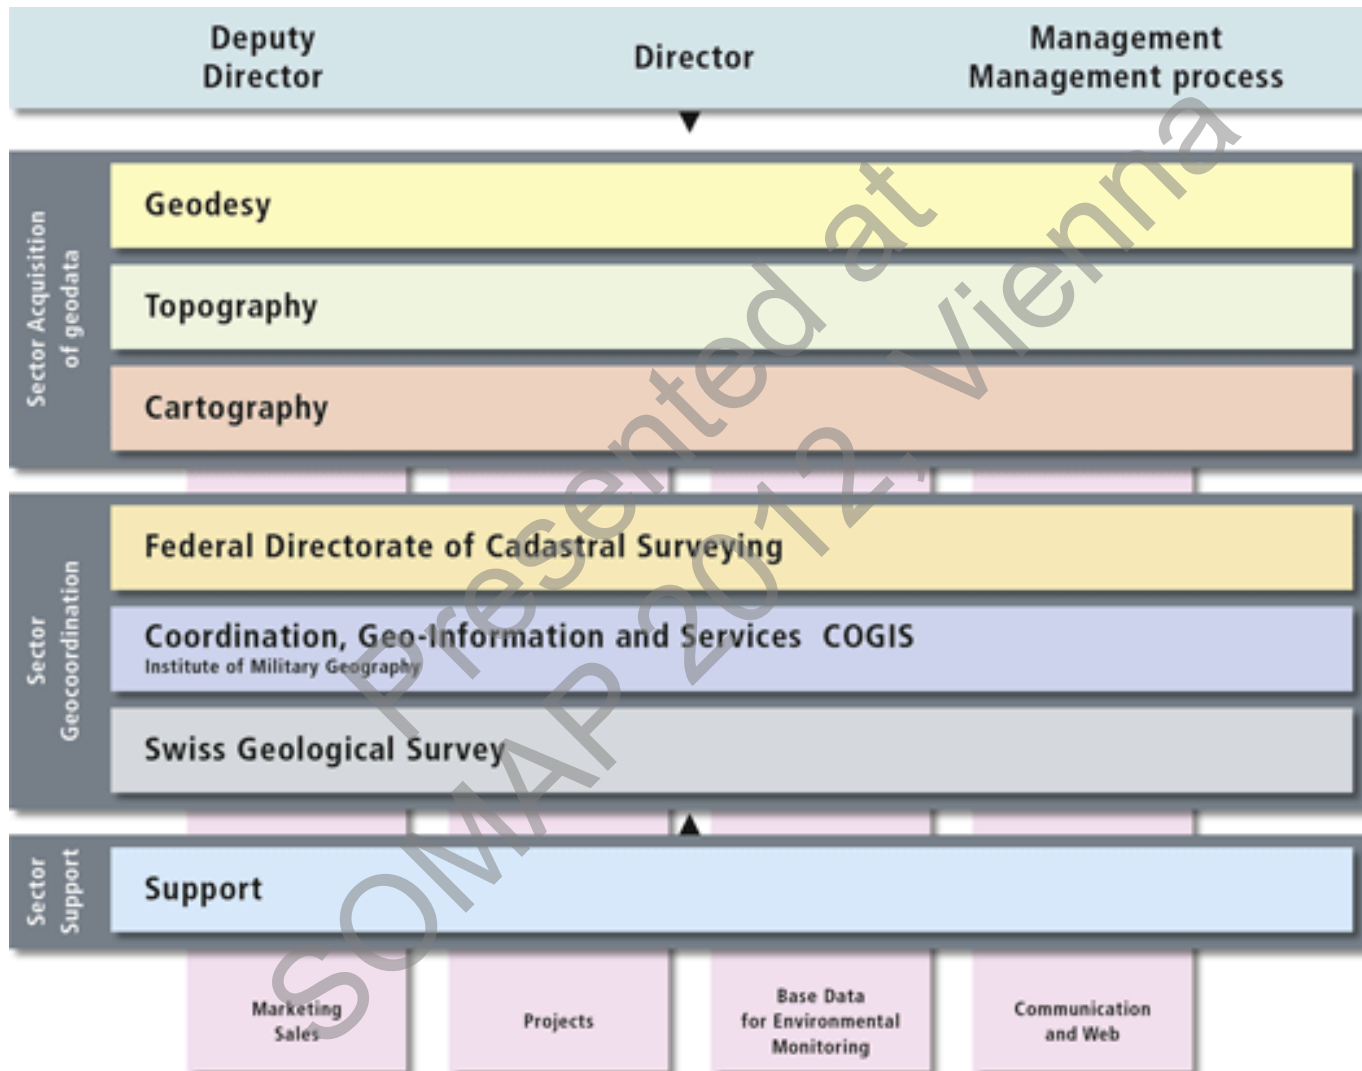

In the function of the Federal Geo-Information center we...

- **produce** high-quality spatial reference data and products derived thereof,
- **coordinate** the activities for federal basis geodata and promote their broad application and
- **guarantee** to provide data and fundamental bases for monitoring spatial development in Switzerland.

This applies to the planning interval from 2012-2015.

Overview

Swiss Map and the Swiss FSDI

1. swisstopo
2. FSDI of Switzerland
3. Swiss Map
4. Swiss Map Mobile
5. Future
6. Discussion / Questions

Swiss Map Mobile - History

- SonyEricsson / Swisscom (2008)
- Swiss Map Mobile 2009:
 - Symbian S60 (Java ME)
 - Windows Mobile (5.x – 6.5)
 - iOS
- 2010:
 - SwitzerlandMobility, panoramic view, AR
- 2011:
 - Android

Swiss Map Mobile

- Possibility of offline data usage is mandatory
- Channels: App Store / iTunes, Google Play
- (Still) growing potential in Switzerland
- Cloud storage
- Partnership with private SW company

- Amap mobile from BEV

Swiss Map and the Swiss FSDI

1. swisstopo
2. FSDI of Switzerland
3. Swiss Map
4. Swiss Map Mobile
5. Future
6. Discussion / Questions

Swiss Map – future aspects

- Possible separation of software and subscription (access to data) instead of integrated and combined products
- Central management of subscriptions
- Enhance interoperability

Presented at
SOMAP 2012, Vienna

Conclusion

The co-existence of free portals/services and commercial products is demonstrated to be possible and beneficiary.

The different and partially complementary needs for geodata can be satisfied using a modern service infrastructure.

The presented solution can evolve and adapt to future fields and dimensions: open government, open data, shopping solutions and new products for new platforms.

Conclusion

The co-existence of free portals/services and commercial products is demonstrated to be possible and beneficiary

The different and partially complementary needs for geodata can be satisfied using a modern service infrastructure.
